Linda Lillie, Sprigs & Twigs Inc, PO Box 245, Gales Ferry, CT 06335

Thank you Readers for Voting Sprigs & Twigs
Best Landscape Company Two Years in a Row & Best Tree Service!
Give us a call if we can be of service!

Question this Week: *I've had this dogwood tree for over 20 years and it seems to be fine. However, in the last several years I've noticed this growth on it. I'm assuming that it's some sort of lichen. Is this anything I should be concerned about? ... Maureen*

You have Lichen growing on your tree. It is completely harmless and there is no need to get rid of it. Lichen is a unique organism because it's not just a fungus, but an alga as well that lives with the fungus symbiotically (when two different kinds of living things live together and depend on each other). The fungus part of lichen collects moisture which the alga needs and the alga creates food made from the energy of the sun for the fungus. Lichen is found in many places like on trees and rocks; in gardens they look wonderful on landscape rocks. Lichens are completely harmless to trees and although they are attached to the tree bark by "rhizines" which are hair-like roots, they do not penetrate deeply enough to cause any concerns. Lichen grows slowly and likes undisturbed surfaces, so you won't see it on species of trees that shed their bark frequently.

Different forms of lichen have been all over the world for centuries, including the Arctic and Antarctica. There are more than 15,000 types of lichen and estimates run as high as 6% of the earth surface is covered by lichen. Around the world, as far back as Roman times, lichens were used as dyes for fabric and in healing ointments. Lichens have even been found inside Egyptian mummies from 1500BC! Since the 1300's, lichens have been the main source of dyes used in litmus paper, a paper testing strip used to determine pH. Today, they are used in perfumes and in dried flower arrangements as well as for miniature plant representations for model railroads.

Lichen will only grow in areas where the atmosphere is clean, so it's a good sign and you can be happy that you have them growing on your property!

Linda K. Lillie has been President of Sprigs & Twigs, Inc. for the last 20 years. She is a graduate of Connecticut College in Botany, an accredited NOFA Organic Land Care Professional, a Connecticut Master Gardener and a national award winning landscape designer for her design and installation projects..

Sprigs & Twigs is now scheduling appointments for 2016 Garden Design, Landscape Maintenance, Tree Care Services, Custom Stonework and Custom Carpentry Services.
