### **Question this Week:**

**I have clover all over my lawn, how can I get rid of it safely? ... Margaret**

### **Linda's Answer:**

Thank you for your question and it's one I get asked often. Clover is the best thing that ever happened to your lawn, so don't try to get rid of it. Let me explain. Prior to World War II, white clover was part of everyone's lawn, but that all changed after the war when synthetic weed-killers were first introduced. An unfortunate side effect of synthetic weed killers intended for dandelions and plantains and the like, was that they also killed clover. Chemical companies had no choice, in order to sell product to kill the weeds, they had to cast clover in a bad light. That began the marketing campaigns that persist to this day to classify clover as a "weed". Absolutely nothing could be further from the truth. Clover is Mother Nature's "fertilizer factory"; it does an amazing thing called "fixing nitrogen" - clover takes nitrogen out of the air, converts it into a form that plants can use and puts it into the soil. If you are lucky enough to have clover in your lawn, it's doing the fertilization for free. Clover generally shows up in poor soil and is nature's way of improving the soil. If you are applying organic fertilizers to your lawn, the clover will diminish over time as your soil improves. Clover in lawns has lots of advantages in addition to the main one of fixing nitrogen:

- 1) It withstands drought well because it has deep roots. In the heat of the summer when grass goes dormant and turns brown, clover will stay green
- 2) It is slow growing and needs cutting less often
- 3) It resists diseases and insects, especially grubs
- 4) When it flowers, it attracts bees - very important crop pollinators
- 5) It will help control weeds in the lawn by filling in poor soil areas

So don't believe the marketing hype coming from the chemical weed killer industry, clover is a great thing to have.

*Linda K. Lillie has been President of Sprigs & Twigs, Inc. for the last 20 years. She is a graduate of Connecticut College in Botany, an accredited NOFA Organic Land Care Professional, a Connecticut Master Gardener and a national award winning landscape designer for her design and installation projects..*

**Sprigs & Twigs is now scheduling appointments for 2016 Garden Design, Landscape Maintenance, Tree Care Services, Custom Stonework and Custom Carpentry Services.**
